Alpha-L associates with beta-2 (By similarity).
SUBCELLULAR LOCATION: Type I membrane protein (By similarity).
DOMAIN: The integrin I-domain (insert) is a VWFA domain. Integrins with I-domains do not undergo protease cleavage.
SIMILARITY: Belongs to the integrin alpha chain family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gene 325:97-101(2004).
-!- FUNCTION: Integrin alpha-L/Deta-2 is a receptor for ICAM1, ICAM2,
-!- FUNCTION: Integrin alpha-L/Deta-2 is a variety of immune phenomena
ICAM3 and ICAM4.
Including leukocyte-endothelial cell interaction, cytotoxic T-cell
including leukocyte-endothelial cell interaction, cytotoxic T-cell
mediated killing, and antibody dependent killing by granulocytes
and monocytes (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         05-JUL-2004 (Rel. 44, Last sequence update)

-!- FUNCTION: Integrin alpha-L/beta-2 is a receptor for ICAMI, ICAM2, ICAM3 and ICAM4. It is involved in a variety of immune phenomena including leukocyte-endothelial cell interaction, cytotoxic T-cell mediated killing, and antibody dependent killing by granulocytes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Note-No experimental confirmation available;

'Intsug Specificity: Leukocytes.

'DOMAIN: The integrin 1-domain (integrin service) with I-domains do not undergo protease cleavage.

'SIMILARITY: Belongs to the integrin alpha chain family.

SIMILARITY: Contains 7 RG-GAP repeats.

SIMILARITY: Contains 1 WFA domain.

'I SIMILARITY: Contains 1 WFA domain.

                                   MEDLINE=85188276; PubMed=3887182; SEQUENCE OF 24-42.

MEDLINE=85188276; PubMed=3887182; Springer T.A., Teplow D.B., Dreyer W.J.; Sequence homology of the LFA-1 and Mac-1 leukocyte adhesion glycoproteins and unexpected relation to leukocyte interferon."; Integrin alpha-L/beta-2 is a receptor for ICAM1, ICAM2, including leukocyte-endothelial cell interaction, cytotoxic T-cell mediated killing, and antibody dependent killing by granulocytes and monocytes. Mice expressing a null mutation of the alpha-L subunit gene demonstrate impaired tumor rejection and impaired
                                                                                                                                                                                                                                      SUBCELLULAR LOCATION: Type I membrane protein.

SUBCELLULAR LOCATION: Type I membrane protein.

TISSUE SPECIFICITY: Leukocytes.

DOMAIN: The integrin I-domain (insert) is a VWFA domain. Integrins with I-domains do not undergo protease cleavage.

SIMILARITY: Belongs to the integrin alpha chain family.

SIMILARITY: Contains 7 FG-GAP repeats.

SIMILARITY: Contains 1 VWFA domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          SUBUNIT: Heterodimer of an alpha and a beta subunit. Screening assay for modulators of integrin binding - using immobilised or labelled alpha-d polypeptide, useful for, e.g. treating type-I diabetes.

Example 5; Fig 1A-D; 106pp; English.

This sequence represents a human beta-integrin CD11b subunit which is used to describe a method for identifying compounds that modulate the interaction of the beta-integrin alpha-d subunit with a binding partner of alpha-d which involves contacting an alpha-d polypeptide with an alpha-d binding partner, one of which is immobilised and the other of which is labelled, in the presence of a test compound, and determining if the compound affects binding between the alpha-d polypeptide and alpha-d binding partner, where the alpha-d polypeptide is alpha-d or its fragment comprising the cytoplasmic, transmembrane or extracellular domain of alpha-d. Compounds that modulate alpha-d binding could be used to treat

Integrins are a class of membrane-associated molecules that participate in cellular adhesion. Integrins are made up of an alpha subunit and a beta subunit. One class of human integrins are restricted to expression in white blood cells and have a common beta2 subunit: the leukocyte integrins. Leu-CAMS, leukointegrins or beta2 integrins. Beta2 integrins have an important role in immune and inflammatory responses. The present protein sequence is the human integrin alpha subunit CD11D. This sequence was used in an alignment to identify a novel beta2 integrin alpha subunit; alpha d (AAA6014 and AAB07159). The present sequence has approximately 60% identity to the protein sequence of alpha d. The Alpha d gene and protein may be useful in therapy for diseases linked to aberrant alpha d function e.g. Type I diabetes, atherosoclerosis, multiple sclerosis, strima, psoriasis, lung inflammation, acute respiratory distress syndrome, rheumatoid arthritis and leukocyte adhesion deficiency clinibition of macrophage infiltration at the site of a central nervous system injury. The monoclonal antibodies can also be used to detect and diagnose Crohn's disease

This invention relates to a modified integrin-I or integrin I-like domain polypeptide comprising at least one disulfide bond so that the domain is stabilised in a desired conformation. The polypeptide of the invention may have antiinflammatory or imunosuppressive activities. The useful as immunogens to produce antibodies that selectively bind to integrin I-domain; and for identifying a modulator of integrin activity, or of inteartion of an integrin and a cognate ligand. The polypeptide of the invention, or antibodies (preferably anti-LFA-I antibody) is useful for treating or preventing an integrin mediated disorder which is an inflammatory or autoimmune disorder in a subject and for inhibiting the binding of an integrin to a cognate ligand such as Crohn's disease, binding of an integrin to a cognate ligand such as Crohn's disease, composition comprising the peptide of the invention is useful for composition comprising the peptide of the invention is useful for the infing an integrin disorder in a subject. The polypeptides and comprising the peptide of the invention is useful for and comprising the peptide of the invention is useful for and comprising the peptide of the invention is useful for and comprising the peptide of the invention is useful for and compress the integrin mediated disorder in a subject.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           treating an integrin mediated disorder in a subject. The polypeptides and/or active or antigenic fragments are useful as reagents for diagnosis of integrin-mediated disorders. The present sequence represents the human integrin-1 alpha-M protein subunit used to generate the mutant
                                                                                                                                                                                                                                                                                   KVEPFEVPNPLPLIVGSSVGGLLLLALITAALYKLGFFKRQYKDMMSEGGPPGAEPQ 1137

```
The invention relates to promoting locomotor recovery, inhibiting concomotor damage, limiting locomotor impairment, or limiting autonomic and sensory dysfunction following spinal cord injury by administering an anti-alpha d (Beta2 integrin alpha2 subunit) monoclonal antibody to a spinal cord injury victim. The method also involves the use of a ligand selected from ICAM-R or VCAM-1 (intracellular cell adhesion molecule, vascular cell adhesion molecule). The method is useful for promoting locomotor recovery, inhibiting locomotor damage, limiting locomotor impairment, or limiting autonomic and sensory dysfunction following spinal cord injury. The appinal cord injury comprises compression of the spinal cord. The antibodies are also useful for reducing inflammation at the site of a central nervous system injury. The specification also details the identification of Beta2 integrins constitution and indiseases such as IAAD (leukocyte adhesion deficiency, and indicates such as IAAD (leukocyte adhesion deficiency, and integrins and indicates and integrins and indicates and integrins and indicates and integrins and indicates and integrins and indicates and integrins and indicates and integrins and indicates and integrins and indicates and integrins and integrins and integrins and integrins and integrins and integrins and integrins and integrins and integrins and integrins and integrins and integrins and integrins and integrins and integrins and integrins and integrins and integrins and integrins and integrins and integrins and integrins and integrins and integrins and integrins and integrins and integrins and integrins and integrins and integrins and integrins and integrins and integrins and integrins and integrins and integrins and integrins and integrins and integrins and integrins and integrins and integrins and integrins and integrins and integrins and integrins and integrins and integrins and integrins and integrins and integrins and integrins and integrins and integrins and integring and integring and integring and 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       inflammatory response, diabetes, multiple sclerosis, arthritis, graft, atherosclerosis, inflammatory bowel disease, Crohn's disease, ulcerative confits, immune complex alveolitis and leukaemia. The present sequence is a Beta2 integrin alpha subunit sequence included for comparison with the Beta2 integrin alpha protein sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Use of an anti-alpha-d monoclonal antibodies for promoting locomotor recovery, inhibiting locomotor damage, limiting locomotor impairment, or limiting autonomic and sensory dysfunction following spinal cord injury.

The invention comprises structurally biased variant integrin inserted (1)

domain proteins, wherein the alterations to the protein occur in at least

two nonontinuous regions. Specifically the the variant integrin I domain

proteins are structurally biased to exist in the open conformation. It

thereby altering the binding ability of the protein. The invention also

comprises nucleic acids encoding the variant integrin I domain proteins.

The integrin I domain proteins and nucleic acids are useful for treating,

preventing or suppressing integrin related inflammatory and immunological

comprises for the proteins and nucleic acids are useful for treating,

fisorders (e.g. rheumantoid arthritis). The variant integrin I domain

proteins and nucleic acids can also be used for treating; ischaemia/

reperfusion (e.g. hypovolemic shock); infarction, cerebral shock, viral

infaction; and cancer. The variant integrin I domain nucleic acids and

proteins may be used in gene therapy, as vaccines and to screen for

bloactive agents. The present amino acid sequence represents the Mac-1

alpha subunit of integrin
Mac-1; integrin alpha subunit; variant integrin inserted domain protein; open conformation; integrin related inflammatory disorder; integrin related inmunological disorder; rheumatoid arthritis; ischaemia; reperfusion; hypovolemic shock; infarction; cerebral shock; viral infection; cancer; gene therapy; vaccine;

mutated human igG1 immunoglobulin hinge region polypeptide, derived from mutated human igG1 immunoglobulin hinge region polypeptide, derived from (a) having 3 or more cysteine residues, where the mutated human igG1 immunoglobulin hinge region polypeptide contains no more than one cysteine residue; and a mutated human igG1 immunoglobulin hinge region polypeptide, derived from (a) having 3 or more cysteine residues; where the mutated human igG1 immunoglobulin hinge region polypeptide contains no cysteine residues immunoglobulin hinge region polypeptide contains capable of at least one immunoglobulin hinge region polypeptide contains dependent cell-mediated cytotoxicity (ADCC) and complement fixation. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a binding domain-immunoglobulin fusion protein comprising a binding domain polypeptide that is fused to an immunoglobulin havy chain cHz constant region polypeptide, an immunoglobulin heavy chain cHz constant region polypeptide that is fused to the hinge region polypeptide that is fused to the CHZ constant region polypeptide that is fused to the CHZ constant region polypeptide comprises: a wild-type human IgG1 immunoglobulin hinge region polypeptide, a mutated human IgG1 immunoglobulin hinge region polypeptide, derived from (a) having 3 or more cysteine residues; where the mutated human IgG1 immunoglobulin hinge region polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             binding domain polypeptide is capable of specifically binding to an antigen. Also included are an isolated polynucleotide encoding the binding domain-immunoglobulin fusion protein, a recombinant expression construct comprising the polynucleotide (operably linked to a promoter), a host cell transformed or transfected with a recombinant expression construct, producing the binding domain-immunoglobulin fusion protein, a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      fixation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New binding domain-immunoglobulin fusion protein, useful for treating a subject having or suspected of having a malignant condition or a B-cell disorder, e.g. melanoma, Grave's disease or autoimmune disease.
Binding domain, immunoglobulin, fusion protein, cytostatic; antiarthritic; immunosuppressive; antidiabetic; antithyroid; neuroprotective; hinge region; immunoglobulin heavy chain; CET2 constant region; 1991, antibody dependent cell-mediated cytocoxicity; ADCC; complement fixa malignant condition; B-cell disorder; melanoma; carcinoma; sarcoma; rheumatoid arthritis; myaschenia gravis; Grave's disease; type I diabetes mellitus; multiple sclerosis; autoimmune disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Binding domain-immunoglobulin fusion protein-associated protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     PA;

ð pharmaceutical composition comprising the binding domain-immunoglobulin fusion protein or polymucleotide and a carrier, and treating a subject having or suspected of having a malignant condition or a B-cell disorder. The binding domain-immunoglobulin fusion protein is useful for treating a subject having or suspected of having a malignant condition or a B-cell disorder, e.g. melanoma, carcinoma or sarcoma, theumatoid arthritis, mysthenia gravis, Grave's disease, type I diabetes mellitus, multiple sclerosis or autoimmune disease. The present sequence is a binding domain-immunoglobulin fusion protein-associated protein sequence. Note: The sequence data for this patent formed part of the printed specification and is also available in electronic format directly from USPTO at sequence. In the printed specification by their SED ID number therefore none of the sequences can be explicitly identified. \$

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a novel isolated or recombinant modified integrin protein having extracellular domains of integrin alpha and beta subunits where one of the subunits has one or more mutations, an altered surface feature or an amino acid substitution or internal deletion, extracellular domains of the integrin beta subunit that comprise a mutation that alters a non-cystenne residue to cysteine or extracellular mutation that alters and beta subunits. The polypeptide of the invention demonstrates antipsoriatic, thrombolytic, anticoagulant, osteopathic, cytostatic, immunosuppressive, antinflammatory, neuroprotective and antisickling activities and may be useful for immunotherapy in order to prevent or treat an integrin-mediated disorder such as an inflammatory disorder, an autoimmune disorder, thrombosis, cancer, osteoprosis, sickle cell anaemia, psoriasis and multiple sclerosis. The current sequence is that of the human integrin alpham such
                                                                                                                                                                                                                                                                                                                                                                                  Novel modified integrin protein having extracellular domains of integrin alpha and beta subunits or integrin alphaII and beta3 subunit, useful for treating integrin mediated disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          240
                                                                                                                                                                                          The present invention relates to diagnosing or monitoring transplant rejection, e.g. cardiac or kidney transplant rejection, in an individual comprises detecting the expression level of one or more genes. The methods, system and kits are useful in diagnosing or monitoring transplant rejection, e.g. heart, kidney, liver, pancreas, pancreatic islet, lung, bone marrow or stem cell transplant rejection, srentransplant rejection or mechanical organ replacement rejection, in an individual. The method is also useful in assessing the immune status of an individual. The method are also useful in diagnosing and monitoring an individual involve the immune system, e.g. rheumatoid arthritis, lupus, inflammatory bowel diseases, multiple sclerosis, HIVAIDS or viral, bacterial or fungal infection. The present sequence represents a protein that is encoded by the mRNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                        9

β

The present invention describes a method (MI) for identifying an inhibitor of HIV entry into a human host cell. (MI) comprises identifying an inhibitor of a cell surface polypeptide selected from CXCR-4 (352 an inhibitor of a cell surface polypeptide selected from CXCR-4 (352 amino acids, SEQ ID NO:10, ADP44059), CCR7 (378 amino acids, SEQ ID NO:12, ADP44059), CDIC (1163 amino acids, SEQ ID NO:12, ADP44069), CDIC (1163 amino acids, SEQ ID NO:12, ADP44069), CDIC (1163 amino acids, SEQ ID NO:24, ADP44069), CSF3R (836 amino acids, SEQ ID NO:24, ADP44065), CDE9 (199 amino acids, SEQ ID NO:26, ADP44067), CDV3 (199 amino acids, SEQ ID NO:26, ADP44067), CDV3 (199 amino acids, SEQ ID NO:26, ADP44073), CRPX (150 amino acids, SEQ ID NO:28, ADP44075), CCC (103 amino acids, SEQ ID NO:28, ADP44075), PZXI (150 amino acids, SEQ ID NO:28, ADP44077), RARA (150 amino acids, SEQ ID NO:30, ADP44087), CRPX (150 amino acids, SEQ ID NO:30, ADP44087), CRPX (150 amino acids, SEQ ID NO:30, ADP44087), CRPX (150 amino acids, SEQ ID NO:30, ADP44087), CRPX (150 amino acids, SEQ ID NO:30, ADP44087), CRPX (150 amino acids, SEQ ID NO:30, ADP44087), CRPX (150 amino acids, SEQ ID NO:30, ADP44087), CRPX (150 amino acids, SEQ ID NO:30, ADP44087), CRPX (150 amino acids, SEQ ID NO:30, ADP44087), CRPX (150 amino acids, SEQ ID NO:30, ADP44087), CRPX (150 amino acids, SEQ ID NO:30, ADP44087), ADP44083), ADP44081), or PTYZB (1009 amino acids, SEQ ID NO:30, ADP44083), ADP44081), or PTYZB (1009 amino acids, SEQ ID NO:30, ADP44083), ADP44083), ADP44081, or PTYZB (1009 amino acids, SEQ ID NO:30, ADP44083), ADP44081, or PTYZB (1009 amino acids, SEQ ID NO:30, ADP44083), ADP44083), ADP44081, or PTYZB (1009 amino acids, SEQ ID NO:30, ADP44083), ADP44083), ADP44083, A a human host cell useful for preventing and/or treating HIV infection, identifying an inhibitor of a cell surface polypeptide such as CXCR-4. SEQ ID NO 14; 133pp; English.

                                                                                                                                                                                                                                                                                                                         79
                                                       The invention comprises marker genes for inflammatory bowel disease (IE-FogammaR IIIa, FogammaR IIIb, Mig, NRG-2, hexokinase, HM74, REG III, IPAP, Mip-1 (beta), L-selectin, EGFL6, IDO, IL-8, CDILG, and TLR2 genes. The DNA and protein sequences of the invention are useful in the detection and treatment of IBD (e.g. ulcerative colitis and Crohn's disease). The present amino acid sequence represents an IBD marker protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              RIHFTFKEFONNPNPRSLIKPITOLLGRTHTATGLRKVVRELFNITNGARKNAFKILFLL

The nucleic sarcoma, possibly via gene therapy or vaccine production. The nucleic The current sequence may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma-upregulated protein of the invention. The current sequence is not shown within the specification per se but was submitted in CD format by the inventor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Early detection of soft tissue sarcoma comprises determining expression of a gene in a first soft tissue sample and a normal soft tissue sample and comparing the gene expression, also useful in treating soft tissue

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         556
          RNA extracted from phorbol myristate acetate stimulated HL-60 myelomonocytic cells. The library was screened with oligonucleotide probes based on tryptic peptide fragments of p150.95. The sequence can be attached to appropriate control elements and expressed in prokaryotic and eukaryotic cells. The protein can be used to treat or prevent rhinoviral infection because it interacts with ICAM-1 and inhibits cell-virus attachment. It can also be used as an anti-inflammatory agent. This sequence represents a human beta-integrin CDIIc subunit which is used to describe a method for identifying compounds that modulate the interaction of the beta-integrin alpha-d subunit with a binding partner of alpha-d which involves contacting an alpha-d polypeptide with an alpha labelled, in the presence of a test compound, and determining if the compound affects binding between the alpha-d polypeptide and alpha-d binding partner, where the alpha-d polypeptide is alpha-d comprising the cytoplasmic, transmembrane or extracellular domain of alpha-d. Compounds that modulate alpha-d binding could be used to treat diseases such as type-I diabetes, atherosclerosis, multiple sclerosis, asthma, psoriasis, lung inflammation, acute respiratory distress syndrome and rheumatoid arthritis
                                                                                                        1019
                                                                                                                                                              1079
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     or

Integrins are a class of membrane-associated molecules that participate in cellular adhesion. Integrins are made up of an alpha subunit and a common beta subunit. One class of human integrins are restricted to expression in white blood cells and have a common beta subunit: the leukocyte integrins, Leu-CAMB, leukointegrins or beta integrins. Beta integrins have an important role in immune and inflammatory responses. The present protein sequence is the human integrin alpha subunit CDIC. This sequence was used in an alignment to identify a novel beta integrin alpha subunit: alpha d (AAA60014 and AAB07359). The present sequence has subunit: alpha d (AAA60014 and AAB07359). The present sequence has subunit: alpha d (AAA60014 and AAB07359). The present sequence has subunit: alpha d function eag. Type I diabetes, atherosclerosis, multiple consistences syndrome, rheumatoid arthritis and leukocyte adhesion deficiency (IAAD). In addition, anti-alpha d monoclonal antibodies may be used in the inhibition of macrophage infiltration at the site of a central nervous
                                       Use of novel anti-alpha integrin d monoclonal antibodies to inhibit macrophage infiltration and reduce inflammation at central nervous system
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; macrophage infiltration inhibition; alpha d integrin; leukocyte integrin; Leu-CAM; leukointegrin; immune response; inflammation; leukocyte adhesion deficiency; LAD; Type I diabetes; atherosclerosis; multiple sclerosis; asthma; psoriasis; beta2 integrin; lung inflammation; acute respiratory distress syndrome; Crohn's disease; rheumatoid arthritis; central nervous system injury; CDllc.
